```
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data. Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
            and products; all new functional assignments courtesy of Monica
            Riley; added promoters, protein binding sites, and repeated
            sequences described in reference 1. The unique numeric identifiers
            beginning with a lowercase 'b' assigned to each gene (protein- or
            RNA-encoding) are now designated as gene synonyms instead of
            labels. This should allow them to be searched for in Entrez as gene
            names.

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 134; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native

```
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

CC   This invention describes a novel biochip comprising probe spots, each
CC   containing many identical probes. The probes are nucleotide sequences of
CC   30-80 bases, are prepared ex situ from synthetic oligonucleotides and at
CC   least one includes a segment of at least 20 bases identical with, or
CC   complementary to, a segment of an open reading frame (orf) of Escherichia
CC   coli K12. The biochip is used for specific detection of gene expression
CC   in K12 and for determining the gene expression pattern, e.g. for
CC   diagnostic determination of which E. coli strains are present in the gut,
CC   and to determine the effects of e.g. growth media on gene expression. The
CC   biochip provides as comprehensive as possible detection of the K12
CC   genome, with simultaneous analysis of many different genes with a single
CC   device, and comparison of gene expression between K12 and its mutants or
CC   other E. coli strains in a single experiment. Apart from qualitative and
CC   quantitative information about gene expression, it also allows
CC   measurements of population densities for the various strains. The use of
CC   synthetic oligonucleotides for preparation of probes allows free
CC   variation in probe length and ensures high purity (and thus selectivity,
CC   reactivity and reproducibility); also synthetic probes are generally
CC   shorter than probes prepared by polymerase chain reaction. ACD68731 to
CC   ACD81540 represent oligonucleotide probes used with the biochip described
CC   in the invention

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 136; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   Identifying at least one gene involved in plant resistance or response to
PT   pathogenic infection for conferring resistance or tolerance to a plant to
PT   bacterial, fungal or viral infection by determining or detecting plant
PT   gene expression.
XX
PS   Claim 27; SEQ ID NO 5263; 899pp; English.
XX
CC   The present invention relates to a method (M1) for identifying genes
CC   involved in plant resistance or response to pathogenic infection. M1
CC   comprises identifying a gene whose expression is significantly altered in
CC   the incompatible interaction of plant gene expression relative to
CC   expression of the gene in an uninfected plant, in a mutant plant that
CC   does not express a gene associated with response to pathogenic infection,
CC   or in a corresponding incompatible or compatible interaction. (M1) is
CC   useful for conferring resistance to resistance or tolerance to a plant to
CC   bacterial, fungal or viral infection. The present sequence was used to
CC   illustrate the invention.

PS   Example 2; Page 61; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
```

```
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention. (Updated on 06-AUG-2003 to
CC   correct OS field.)

PT   Detecting Chlamydial organism in its persistent phase by detecting
PT   expression change of range of genes belonging to their respective
PT   biosynthetic pathways when expression is compared to that of organism in
PT   lytic phase.
XX
PS   Disclosure; Page 117-118; 196pp; English.
XX
CC   The invention relates to composition and methods for detecting organisms
CC   of the Chlamydiaceae family, including species of Chlamydophila and
CC   Chlamydia, in the persistent phase of their developmental cycle and for
CC   the diagnosis of chronic or persistent infections caused by such
CC   organisms. The composition is useful for modulating the expression of
CC   gene such as pyk, nlpD, Cpn0585, a gene belonging to same regulatory/
CC   biosynthetic pathway and ompA, ompB, hsp60, a gene involved in
CC   lipopolysaccharide biosynthesis. It is also useful for modulating the the
CC   level and/or functional activity of an expression product of these genes,
CC   where the gene is present in an epithelial cell (selected from
CC   cardiovascular system, respiratory tract, genital tract, reproductive
CC   system or conjunctiva), macrophage, or a cell associated with
CC   atherosclerotic tissue or associated with multiple sclerosis brain
CC   tissue. The composition is useful for treatment and/or prophylaxis of a
CC   chronic infection caused by an organism of the Chlamydiaceae family in a
CC   patient. Antigen associated with the persistent phase of the
CC   developmental cycle of an organism of the Chlamydiaceae family, is useful
CC   in the manufacture of a medicament, for treating and/or preventing
CC   Chlamydiaceae infection in a patient. The present sequence is Chlamydia
CC   pneumoniae nlpD gene. (Updated on 29-AUG-2003 to standardise OS field)

PT   Novel polynucleotide of the endothelin/endothelin converting
PT   enzyme/receptors of endothelin and endothelin converting enzyme signaling
PT   system associated with cardiovascular disease, useful for treating the
PT   disease.
XX
PS   Claim 1; Page; 190pp; English.
XX
CC   The invention describes a polynucleotide (I) of the endothelin
CC   (EDN)/endothelin converting enzyme (ECE)/receptors of EDN and ECE (EDNR)
CC   signaling system which is associated with a cardiovascular disease. (I),
CC   the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing (I)
CC   or (II) is useful for producing cells capable of expressing a molecular
CC   variant polypeptide which is associated with a cardiovascular disease.
CC   (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing a
CC   molecular variant gene comprising (I) is useful for identifying and
CC   obtaining a pro-drug or drug capable of modulating the activity of a
CC   molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system
CC   or its gene product, or for identifying and obtaining an inhibitor of the
CC   activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE
CC   signaling system or its gene product. The isolated proteins and
CC   polynucleotides encoding them are useful for preparation of a
CC   pharmaceutical composition for treating a cardiovascular disease such as
CC   coronary heart disease, hypertension, atherosclerosis, or related to
CC   abnormal angiogenesis or fatty acid metabolism e.g. diabetes and familial
CC   hypercholesterolaemia. The gene or a polynucleotide fragment of the
CC   EDN/ECE/EDNR signaling system are useful as forensic markers, for
CC   creating a transgenic animal and in creation of a solid support
CC   comprising polynucleotides, genes, vectors, polypeptides, antibodies or
CC   host cells of the invention. This sequence encodes the cardioavscular
CC   regulator Endothelin-3 (EDN-3). Note: This sequence does not appear in
CC   the specification but has been obtained from GenBank using information
CC   given in the invention

PS   Claim 20; SEQ ID NO 101; 772pp; English.
```

```
XX
CC   The invention relates to novel isolated polypeptides, mature form of the
CC   polypeptide, a sequence that is 95% identical to the polypeptide or the
CC   polypeptide comprising one or more conservative substitutions. The NOVX
CC   polypeptide is useful for treating or preventing a pathology associated
CC   with the polypeptide e.g. disorders associated with aberrant expression
CC   or activity of the polypeptide, such as cancer, diabetes, obesity, and
CC   endocrine, CNS and inflammatory disorders. They can also be used in
CC   various detection and screening assays, chromosome mapping, tissue typing
CC   and predictive medicine. This sequence corresponds to the coding sequence
CC   for one of the polypeptides of the invention.

PT   e.g. an inflammatory disorder, an immune disorder or a neurodegenerative
PT   disorder.
XX
PS   Claim 16; Page 21-30; 36pp; English.
XX
CC   The invention relates to a new isolated tumour necrosis factor receptor
CC   related protein-1 polypeptide, TRP-1. The tumour necrosis factor receptor
CC   related protein-1 polypeptide, nucleic acid and antibody are useful for
CC   diagnosing and treating disorders in a human, such as an inflammatory
CC   disorder (e.g. rheumatoid arthritis, Crohn's disease, AIDS, allergies,
CC   asthma, irritable bowel syndrome, ulcerative colitis, multiple sclerosis
CC   or diabetes mellitus), an immune disorder (e.g. autoimmune disease or
CC   systemic lupus erythematosus), a neurodegenerative disorder (e.g.
CC   Alzheimer's disease or Parkinson's disease), a cell proliferative
CC   disorder (e.g. various types of cancer), a cell differentiation disorder
CC   (e.g. stroke, ischaemic injury or myocardial infarction), an apoptotic
CC   disorder, a gastrointestinal and reproductive tract disorder (e.g. ulcers
CC   or prostatitis), bone disorder (e.g. osteoporosis), blood disorder (e.g.
CC   aplastic anaemia or thrombocytopenia) or viral disorder (e.g. hepatitis
CC   or viral encephalitis). The polypeptides are also useful in manufacturing
CC   a medicament for treating the disorders. The methods are useful for
CC   identifying molecules that bind to and/or modulate the activity of the
CC   polypeptide, or the transcription or translation of the nucleic acid. The
CC   present sequence represents human tumour necrosis factor receptor related
CC   protein-1, TRP-1, DNA which is located on chromosome Xq12

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 138; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 107-110; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the

isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

/note="Vector: pHOS1; Site_1: Bst I; Constructed at The Institute for Genomic Research (TIGR), Rockville, MD. Genomic DNA isolated from broth cultures of E. histolytica using a method described by Clark and Diamond (Clark, C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a method for isolate identification. Exp. Parasitol. 77:450.). The DNA was mechanically sheared to give a tight size distribution (~2 kb). The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-1998) Laboratory of Genetics, University of
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data. Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
            and products; all new functional assignments courtesy of Monica
            Riley; added promoters, protein binding sites, and repeated
            sequences described in reference 1. The unique numeric identifiers
            beginning with a lowercase 'b' assigned to each gene (protein- or
            RNA-encoding) are now designated as gene synonyms instead of
            labels. This should allow them to be searched for in Entrez as gene
            names.

  CONSRTM   The Salmonella typhimurium Genome Sequencing Project
  TITLE     Direct Submission
  JOURNAL   Submitted (29-MAR-2001) Genome Sequencing Center, Department of
            Genetics, Washington University School of Medicine, 4444 Forest
            Park Boulevard, St. Louis, MO 63108, USA
COMMENT     COMMENT     Supported by NIH grant 5U 01 AI43283

            Coding sequences below are predicted from manually evaluated
            computer analysis, using similarity information and the programs;
            GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and
            GeneMark; http://opal.biology.gatech.edu/GeneMark/

            EC numbers were kindly provided by Junko Yabuzaki and the Kyoto
            Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/,
            and Pedro Romero and Peter Karp at EcoCyc;
            http://ecocyc.PangeaSystems.com/ecocyc/

            The analyses of ribosome binding sites and promoter binding sites
            were kindly provided by Heladia Salgado, Julio Collado-Vides and
            ReguonDB;
            http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistries or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one m13 subclone.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.

XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native

```
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

XX
CC   The invention relates to an isolated peptide capable of binding a
CC   mammalian plasma protein or of generating an immune response in a mammal
CC   selected from sequences shown in ABR82642, ABR82648-49. The peptide or
CC   antibody is useful for treating a bacterial infection in a human or
CC   animal or in the manufacture of a medicament for the prophylactic
CC   treatment of a bacterial infection, such as Escherichia coli, Salmonella
CC   or Shigella infection. The peptide that is immobilized on a solid support
CC   is also useful as a reagent for determining the ability of a plasma
CC   protein to bind to bacteria. The present sequence represents an E. coli
CC   15 kDa protein encoding DNA

CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 137; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal..
XX
PS   Disclosure; Page 136; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

  TITLE     Direct Submission
  JOURNAL   Submitted (17-JUN-2002) Weisshaar B., Max-Planck-Institut fuer
            Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany
COMMENT     This sequence is recovered from the left border of the T-DNA. It
            indicates an insertion close to or within gene At3g28590. The
            sequences are generated at the MPI for Plant Breeding Research in
            the context of the GABI-Kat project. GABI-Kat is part of the German
            Plant Genomics program designated 'GABI'. Information on line
            availability can be found at:
            http://www.mpiz-koeln.mpg.de/GABI-Kat/.

            Individual basecall and confidence value were assigned using the
            Phred software(http://www.phrap.org/). Overall sequence quality
            assessment and vector trimming was conducted using the Lucy
            software (version 1.16s, http://www.tigr.org/softlab/). Lucy
            parameters were set to ensure an overall trimmed quality of 97.5%
            or better without any vector fragments in the chosen high quality
            region of each sequence. Low-quality bases between the poly-T and
            the high-quality region were replaced with N's to serve as spacers
            using a Perl program (est_process.pl), written by Dr. Hui-Hsien
            Chou.

/clone_lib="ISUM6"
/note="Vector: pSlip7 (4.43 kb); Site_1: EcoRI; Site_2: NotI; Tissue samples were collected and partially pooled prior to RNA extraction. First-strand cDNAs were prepared from 21 individual pools of oligo-dT selected mRNAs by priming with 21 different NotI oligo-dT tag primers (5'-AACTGGAAGAATTCGCGGCCGCNNNNNNTTTTTTTTTTTTTTTT-3'). Distinguishable 'bar code' tags, (N)6, were used for each separate first-strand cDNA synthesis. Hence, these bar code tags can be used to identify the mRNA pool from which a particular cDNA clone was derived. The 'bar code' tags associated with specific tissue sources are: ATACGC--Germinated seeds and seedlings (1, 2, 8, 11 DAG); ACTGGC--Mixed mature tissues (17, 21, 38, 69, 77 DAG); CACAGC--Kernels (3, 5, 10, 15, 20, 25, 30, DAP); TAACCC--Adventious roots (65 DAG); CAGGCG--Tassels (3-39 cm, 53 and 56 DAG); AGGTAC--Immature ears (0.2-3.0 cm, 53, 56, 59 DAG); TGAGCG--Husks (73 DAG); GACCAC--Silks; AATCGG--unpollinated first ears; CTAAGG--ear shanks; GAAGAG--etiolated seedlings; AGTGAG--callus; GTGGAC--Cycloheximide-treated callus; GTCACC--Anaerobic treated seedlings; CGTCCA--NAA (a-Naphthalene acetic acid)-treated seedlings; GATGCC--Kinetin-treated seedlings; AAGACC--ACPC (1-aminocyclopropane-1-carboxylix acid)-treated seedlings; GCCTCA--Brassinolide-treated seedlings; CTAGCC--ABA (Abscisic acid)-treated seedlings; TACGGA--GA (Gibberellic acid)-treated seedlings; GCAGGA--JA (Jasmonic acid)-treated seedlings; Equal amounts of first-strand cDNA from each reaction were combined and used as template for DNA PolI-catalyzed 2nd strand synthesis. After the addition of EcoRI adaptors, ds-cDNAs were digested with NotI. Molecules between 0.5 and 2.0 kb were directionally cloned into the EcoRI and NotI sites of the pSlip7 expression vector. Plasmid DNA isolated from the library was digested with NotI to remove empty vector clones. Linear DNAs from 5.4 to 7 kb were gel purified and ligated at low concentration to promote recircularization. Ligation products were precipitated and transformed into DH10B host cells. The complexity of the resulting library was 1.2 x 10X6."

JOURNAL Submitted (13-OCT-1998) Laboratory of Genetics, University of Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT This sequence was determined by the E. coli Genome Project at the University of Wisconsin-Madison (Frederick R. Blattner, director). Supported by NIH grants HG00301 and HG01428 (from the Human Genome Project and NCHGR). The entire sequence was independently determined from E. coli K12 strain MG1655. Predicted open reading frames were determined using GeneMark software, kindly supplied by Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA, 30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that have been correlated with genetic loci are being annotated with CG Site Nos., unique ID nos. for the genes in the E. coli Genetic Stock Center (CGSC) database at Yale University, kindly supplied by Mary Berlyn. A public version of the database is accessible (http://cgsc.biology.yale.edu). Annotation of the genome is an ongoing task whose goal is to make the genome sequence more useful by correlating it with other data. Comments to the authors are appreciated. Updated information will be available at the E. coli Genome Project's World Wide Web site (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and its annotations are periodically updated; this is version M54. No sequence changes. Annotation updates: updated gene identifications and products; all new functional assignments courtesy of Monica Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase 'b' assigned to each gene (protein- or RNA-encoding) are now designated as gene synonyms instead of labels. This should allow them to be searched for in Entrez as gene names.

  TITLE     Direct Submission
  JOURNAL   Submitted (29-MAR-2001) Genome Sequencing Center, Department of
            Genetics, Washington University School of Medicine, 4444 Forest
            Park Boulevard, St. Louis, MO 63108, USA
COMMENT     COMMENT     Supported by NIH grant 5U 01 AI43283

            Coding sequences below are predicted from manually evaluated
            computer analysis, using similarity information and the programs;
            GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and
            GeneMark; http://opal.biology.gatech.edu/GeneMark/

            EC numbers were kindly provided by Junko Yabuzaki and the Kyoto
            Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/,
            and Pedro Romero and Peter Karp at EcoCyc;
            http://ecocyc.PangeaSystems.com/ecocyc/

            The analyses of ribosome binding sites and promoter binding sites
            were kindly provided by Heladia Salgado, Julio Collado-Vides and
            ReguonDB;
            http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistries or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
```

```
        as compressions and repeats; all regions were covered by sequence
        from more than one m13 subclone.

RESULT 14
AL627269
LOCUS AL627269 254050 bp DNA linear BCT 04-JUL-2003
DEFINITION Salmonella enterica serovar Typhi (Salmonella typhi) strain CT18, complete chromosome; segment 5/20.
ACCESSION AL627269 AL513382
VERSION AL627269.1 GI:16502231
KEYWORDS .
SOURCE Salmonella enterica subsp. enterica serovar Typhi
ORGANISM Salmonella enterica subsp. enterica serovar Typhi
Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales; Enterobacteriaceae; Salmonella.
REFERENCE 1 (bases 1 to 254050)
AUTHORS Parkhill,J., Dougan,G., James,K.D., Thomson,N.R., Pickard,D., Wain,J., Churcher,C., Mungall,K.L., Bentley,S.D., Holden,M.T.G., Sebaihia,M., Baker,S., Basham,D., Brooks,K., Chillingworth,T., Connerton,P., Cronin,A., Davis,P., Davies,R.M., Dowd,L., White,N., Farrar,J., Feltwell,T., Hamlin,N., Haque,A., Hien,T.T., Holroyd,S., Jagels,K., Krogh,A., Larsen,T.S., Leather,S., Moule,S., O'Gaora,P., Parry,C., Quail,M., Rutherford,K., Simmonds,M., Skelton,J., Stevens,K., Whitehead,S. and Barrell,B.G.
TITLE Complete genome sequence of a multiple drug resistant Salmonella enterica serovar Typhi CT18
JOURNAL Nature 413 (6858), 848-852 (2001)
MEDLINE 21534947
PUBMED 11677608
REFERENCE 2 (bases 1 to 254050)
AUTHORS Parkhill,J.
TITLE Direct Submission
JOURNAL Submitted (25-OCT-2001) Submitted on behalf of the Salmonalla sequencing team, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 1SA, UK
COMMENT E-mail: parkhill@sanger.ac.uk
Notes:
Details of S. typhi sequencing at the Sanger Centre are available on the World Wide Web.
(URL, http://www.sanger.ac.uk/Projects/S_typhi/).

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 134; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native

CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 134; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT Biochip containing probes complementary with open reading frames in
PT Escherichia coli K12, useful for detecting gene expression and expression
PT patterns.
XX
PS Claim 3; Page 23; 2004pp; German.
XX
CC This invention describes a novel biochip comprising probe spots, each
CC containing many identical probes. The probes are nucleotide sequences of
CC 30-80 bases, are prepared ex situ from synthetic oligonucleotides and at
CC least one includes a segment of at least 20 bases identical with, or
CC complementary to, a segment of an open reading frame (orf) of Escherichia
CC coli K12. The biochip is used for specific detection of gene expression
CC in K12 and for determining the gene expression pattern, e.g. for
CC diagnostic determination of which E. coli strains are present in the gut,
CC and to determine the effects of e.g. growth media on gene expression. The
CC biochip provides as comprehensive as possible detection of the K12
CC genome, with simultaneous analysis of many different genes with a single
CC device, and comparison of gene expression between K12 and its mutants or
CC other E. coli strains in a single experiment. Apart from qualitative and
CC quantitative information about gene expression, it also allows
CC measurements of population densities for the various strains. The use of
CC synthetic oligonucleotides for preparation of probes allows free
CC variation in probe length and ensures high purity (and thus selectivity,
CC reactivity and reproducibility); also synthetic probes are generally
CC shorter than probes prepared by polymerase chain reaction. ACD68731 to
CC ACD81540 represent oligonucleotide probes used with the biochip described
CC in the invention

PT Identifying at least one gene involved in plant resistance or response to
PT pathogenic infection for conferring resistance or tolerance to a plant to
PT bacterial, fungal or viral infection by determining or detecting plant
PT gene expression.
XX
PS Claim 27; SEQ ID NO 5263; 899pp; English.
XX
CC The present invention relates to a method (M1) for identifying genes
CC involved in plant resistance or response to pathogenic infection. M1
CC comprises identifying a gene whose expression is significantly altered in
CC the incompatible interaction of plant gene expression relative to
CC expression of the gene in an uninfected plant, in a mutant plant that
CC does not express a gene associated with response to pathogenic infection,
CC or in a corresponding incompatible or compatible interaction. (M1) is
CC useful for conferring resistance to resistance or tolerance to a plant to
CC bacterial, fungal or viral infection. The present sequence was used to
CC illustrate the invention.

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 136; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   New isolated cereal plant enzyme genes used for, e.g. expression of
PT   antisense sequences of granule bound synthase.
XX
PS   Claim 17; Page 63-65; 171pp; English.
XX
CC   The invention relates to a novel enzyme of starch biosynthetic pathway in
CC   a cereal plant, where the enzyme is selected from starch branching enzyme
CC   (SBE) I , SBE II, starch soluble synthase (SSS) I, and debranching enzyme
CC   (DBE), with the proviso that the enzyme is not SSS I of rice, or SBE I of
CC   rice or maize. The methods and products can be used for targeting
CC   expression specifically to the endosperm of the seeds of cereal plants
CC   such as wheat or barley. They can be used for the expression of e.g.
CC   antisense sequences of granule-bound synthase (GBSS), SBE II, low mol.
CC   wt. glutenin, grain softness protein I, bacterial isoamylase, bacterial
CC   glycogen synthase, and wheat high mol. wt. glutenin Bx17. They can be
CC   used for modifying the characteristics of starch produced by a plant. The
CC   present sequence represents the wheat SBE I promoter containing sequence.

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 107-110; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.
CC   (Updated on 25-MAR-2003 to correct PF field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                     contributed to prepare mouse tissues. 1st strand cDNA was
                     primed with a primer [5'
                     GAGAGAGAGAGCGGCCGCAACTCGAGTTTTTTTTTTTTTTTTVN 3'], cDNA was
                     prepared by using trehalose thermo-activated reverse
                     transcriptase and subsequently enriched for full-length by
                     cap-trapper. Second strand cDNA was prepared with the
                     primer adapter of sequence [5'
                     GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCCCC 3']. cDNA
                     was cleaved with BamHI and XhoI. Vector: a modified
                     pBluescript KS(+) after bulk excision from Lambda FLC I."

/note="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 135; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native

CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX

PS Disclosure; Page 135; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 136; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                     KS(+); Site_1: EcoRI; Site_2: Not1; This normalized
                     library was constructed from 1 million independent clones.
                     cDNA synthesis was initiated using an oligo(dT) primer,
                     using methylated C in the first strand synthesis reaction.
                     Following this first strand reaction, double-stranded cDNA
                     was blunted, ligated to NotI adapters, digested with
                     EcoRI, size-selected, and cloned into the NotI and EcoRI
                     compatible sites of a custom modified MCS of the
                     pBluescript (KS+) vector. The library was normalized in 2
                     rounds using conditions adapted from Soares et al., PNAS
                     (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6
                     (1996): 791, except that a significantly longer
                     reannealing hybridization was used."
